(54) Title: INCREMENTAL PROVISIONING OF SOFTWARE

(57) Abstract: Methods and apparatuses provide for  
incremental provisioning of software for a processing system.  
For instance, a processing system may include a machine  
accessible medium and a processor in communication with the  
machine accessible medium. In addition, instructions encoded  
in the machine accessible medium may cause the processing  
system to automatically determine whether a storage device  
in the processing system includes modified blocks, based at  
least in part on a write log file that identifies blocks that were  
modified during a user session on the processing system. In  
response to identifying at least one modified block in the storage  
device, the processing system may automatically replace data  
in the modified block with backup data from a different storage  
device. Other embodiments are described and claimed.
